

Graphite Drawing

Objectives

- 5 different values (W, LG, MG, DG, B) were used throughout composition
- There are several areas of **high contrast** that highlight the most important parts of the composition
- At least **2 value scales** were used in the composition

TIPS:

➤ **DO NOT OUTLINE EVERYTHING IN A DARK CONTOUR LINE...** Instead, your edges should be the same value that it is next to.

➤ **Master your Grip!** Instead of using the point, you should use the side of the lead to maximize its utility. Use the tip for small details but use the side for large areas, textures, etc.

➤ Try out **different ways to fill in areas...** hatch marks, cross-hatches, scribbles, etc.

➤ **Don't let it smudge** by placing a piece of paper underneath your drawing hand will working.
